

EIOBoard™ Kiosk Solution

The Electronic In / Out Board designed by **Savance** helps to route calls, locate co-workers, and improve inner-office communications. To fully tap into the usability and functionality of the system, employee status must be kept accurate. Savance's touch screen kiosk solution was designed to improve the accuracy by facilitating status updates. The operator no longer has to act as the sole status keeper. On the way in or out of the building, the users just key in their configured ID and click on the button that represents their new status (Such as In, Out, or at Lunch).

Several add-on solutions can further facilitate the check in/check out process. Options include combinations of employee badge readers, barcode readers, HID passive RF (short range), active RF (long range), as well as a fingerprint scanner. Contact Savance for assistance on choosing which solution is right for your application.

Several payroll services are supported for integration with EIOBoard. The kiosk and identification devices facilitate punch in and punch outs for non-exempt employees when the EIOBoard time keeping solution is fully implemented. Since multiple devices are supported, this solution could allow access to certain areas, update the payroll service, and update the employee's status for the in/out board from any kiosk.

Biometrics such as fingerprint virtually eliminate buddy punching and further facilitate status updates. Users no longer have to remember a login; instead they can use their fingerprint, thus saving time and reducing errors.

KIOSK AND AUTO-STATUS PRICING

The prices below include the pricing for a “kiosk” solution with options for magnetic stripe, barcode, HID, fingerprint, and Long Range RF add-ons. The system can also be used with time and attendance systems for accurate payroll. Please ask a Savance sales representative for more information. All hardware comes with a one year warranty

Kiosk

Picture	Part Number	Description	Price
	EB-KIOSK-SW	Kiosk Software Only	\$395/ea
